

Senior Data Engineer – PL/SQL, Informatica

Bravo LT needs you to be a part of our highly motivated group of technology experts. We share a passion for technology and the community we serve, and we are committed to building long-lasting, productive relationships. We focus on giving back to the community, positively impacting society, and providing quality solutions that work. We believe in *autonomy*, *mastery*, and *purpose* and in trusting people to do the right thing - and we think Bravo LT is a pretty great place to be a part of.

The Senior Data Engineer will work with an existing team to develop, upgrade, troubleshoot, maintain, analyze, automate, secure, and recommend data warehouse solutions. You'll be responsible for expanding and optimizing our data and data pipeline architecture, as well as optimizing data flow and collection to support business needs. To support these needs, the Data Engineer is an experienced data pipeline builder and data wrangler with an aptitude for identifying nuances and patterns within complex datasets with the goal of transforming raw data into timely, reliable data sets. If you have a passion for ETL, PL/SQL, Informatica Powercenter and creating meaningful outcomes with data, this role is for you!

Responsibilities

- Under minimal supervision, designs, codes or configures, tests, debugs, deploys, and maintains programs using a variety of software development toolkits, programming languages, testing/verification applications and other tools, while adhering to specific development best practices and quality standards
- Designs and documents conceptual, logical, and physical data models (including entity relationship (ER) diagrams
- Advise and mentor intermediate and junior engineers on best practices
- Performance tuning and identification of bottlenecks
- Develop, test, and deploy ELT / ETL processes across multiple sources, targets and tools.
- Develop, test, and deploy self-service reporting assets to provide data exploration capabilities to end users
- Performs data cleansing and profiling to ensure accuracy and quality of information.
- Provides on-call support for data platforms, reporting assets, and ETL processes.
- Gather business requirements/user stories, translating that information into detailed technical specifications from which programs will be written or configured, and validating that the proposed applications align with both the architectural design and the business needs
- Participate in process leadership for work groups, and product/service delivery strategy and work plans

Qualifications

- 2+ years of experience with developing in PL/SQL and ETL processes
- Strong Oracle application development skills using PL/SQL for ETL processes
- Experiencing developing SQL analytic functions, Lead and Lag functions, Content Switching, Oracle external tables, PL/SQL exceptions, Oracle directory objects in an Oracle PL/SQL environment
- General knowledge of ETL, including writing/modifying SQL, and troubleshooting issues
- Experience with Snowflake
- Hands on experience with Data Build Tool (DBT)
- Strong Experience with Informatica Powercenter
- Experience supporting the healthcare insurance industry
- Knowledge of Erwin data modeler
- Nice to have experience - PowerBI & AWS data warehousing experience
- Strong written and oral skills, time management, balancing multiple priorities, and being able to

Job Description

take a self-structured approach with minimal direct supervision

- Bachelor's degree in computer science or similar field
