

## Senior Azure Data Engineer

Bravo LT needs you to be a part of our highly motivated group of technology experts. We share a passion for technology and the community we serve, and we are committed to building long-lasting, productive relationships. We focus on giving back to the community, positively impacting society, and providing quality solutions that work. We believe in autonomy, mastery and purpose and in trusting people to do the right thing - and we think Bravo LT is a pretty great place to be a part of.

Bravo LT is partnering with one of West Michigan's leading retail organizations for a Direct Hire Sr. Azure Data Engineer role. This organization is transitioning to the cloud and is looking for an Azure data expert who can join their team and build out a cloud strategy for their data. If you have expertise in transacting SAP data into Power BI utilizing the power of Azure, this role is for you. Did I mention this is a greenfield project where you'd be the lynch pen in its success? Cool, right!

### Responsibilities

- Implement modern data solutions with Azure Data Factory, Data Lake, Data Bricks and SQL data warehousing solutions
- Provide guidance and support on data governance, security and privacy across the cloud environment
- Functions as a task leader on large projects and/or project leader on small projects; coordinates resources, milestone schedules and related communication; responsible for delivery of an assigned scope of work
- Confers with business and IT team members, including across teams, to determine requirements while using best practices to support business needs
- Estimates configuration and development efforts for self and functional area
- Leads and/or assists team members with problem solving related to software application performance and usage; collaborates across teams as needed
- Participates in and supports change management standards and procedures; assists in developing standards and procedures when required
- Evaluates make vs. buy system alternatives under general direction; maintains awareness of current technologies and trends; assimilates new technology into company work environment
- Mentors data engineers on both technical support and business requirements
- Partners with data scientists to collect and combine data from multiple sources for model consumption
- Develops technical and business proficiency through education, work assignments, research and technical/user group participation; demonstrates practical application of learning and actively shares knowledge across functional area

### Qualifications

- Bachelor's degree in Computer Science or a related field or equivalent work experience
- 3+ years of experience with Microsoft Azure products: Azure Data Factory, Synapse, Data Bricks and DevOps
- 3+ years of experience with SQL development
- 3+ years of proven experience in the design and implementation of modern data lake/warehouse architecture, in data delivery/analytics, data modeling, ETL tools, master data management and deploying highly automated and documented solutions
- Working knowledge of Azure Monitor, Application Insights, Cost Management or equivalent tooling
- Experience with Python programming a plus
- Experience with MS Power BI a plus

Job Description

---

- Strong communicative, analytical, problem solving and organizational skills
- Ability to establish and maintain effective working relationships at all levels of the organization
